Section 07 Creator		

SECTION 01

General Guide

- ☐ This CTF is **skill-based**, not competitive – meaning the points you earn is nowhere evaluated.
- ☐ Solve the challenges, defeat the demons, and earn your points.
- ☐ If you're not enjoying at least some part of it, you're probably overthinking it.
- ☐ Remember, HINTS exist for a reason. So, use them when you feel stuck rather than wandering around blindly.
- ☐ 36 hours is decent time. So, stay relaxed and hydrated – you got this !!!
- ☐ **Flag Format:** `KNY{this_is_a_demo_flag}`

NOTE

Remember, this CTF isn't a battle against each other—it's a battle against **YOURSELF**.

There isn't any ranking system.

Outdo your previous self, break that goddamn wall, and be better than you were yesterday.

SECTION 02

About Kimetsu CTF

- ☐ The CTF follows the storyline of **Demon Slayer**, the Japanese anime.
- ☐ Every challenge is tied to a moment in the story, after which you're tasked with solving the challenge and capturing the flag.
- ☐ The CTF follows a **Jeopardy-style** format, featuring categories like Web Exploitation, Reverse Engineering, Cryptography, and a lot more. *(Too lazy to list them all, hehe.)*
- ☐ Every challenge is tied to a moment in the story, after which you're tasked with solving the challenge and capturing the flag.
- ☐ You've got **36 hours** to dive in. Do whatever you can and **pwn** the hell out of this CTF.

★ IMPORTANT

The project and its servers will remain available indefinitely, even after the 36 hours are over. The time limit only applies to the assistance and management we'll be providing. So, let's see how much damage you can do in those 36 hours, yeah?

SECTION 03

Initial Setup

1. Download the CTF-Setup from the provided [Download Link](#).
2. The archive is password-protected. The **password** will be shared on the day of the CTF.
3. Upon unlocking the zip file and extracting it, launch the **index.html** in your browser to begin the hack.

◆ IMPORTANT POINT

- ☐ Keep the extracted folder **intact**.
- ☐ Renaming, moving, or deleting files is a dumb move.
- ☐ A **stable internet** connection is recommended.
- ☐ **Switching browsers** mid-game won't go as planned as every data is locally stored.

[↑ Return to Table of Contents](#)

SECTION 04

Additional Setup

- A few challenges require you to interact with machines hosted on the **TryHackMe** platform.
- To avoid last-minute setup hassles, download your **TryHackMe VPN (UDP)** configuration file for the **Europe (Frankfurt)** region beforehand — [Link](#).

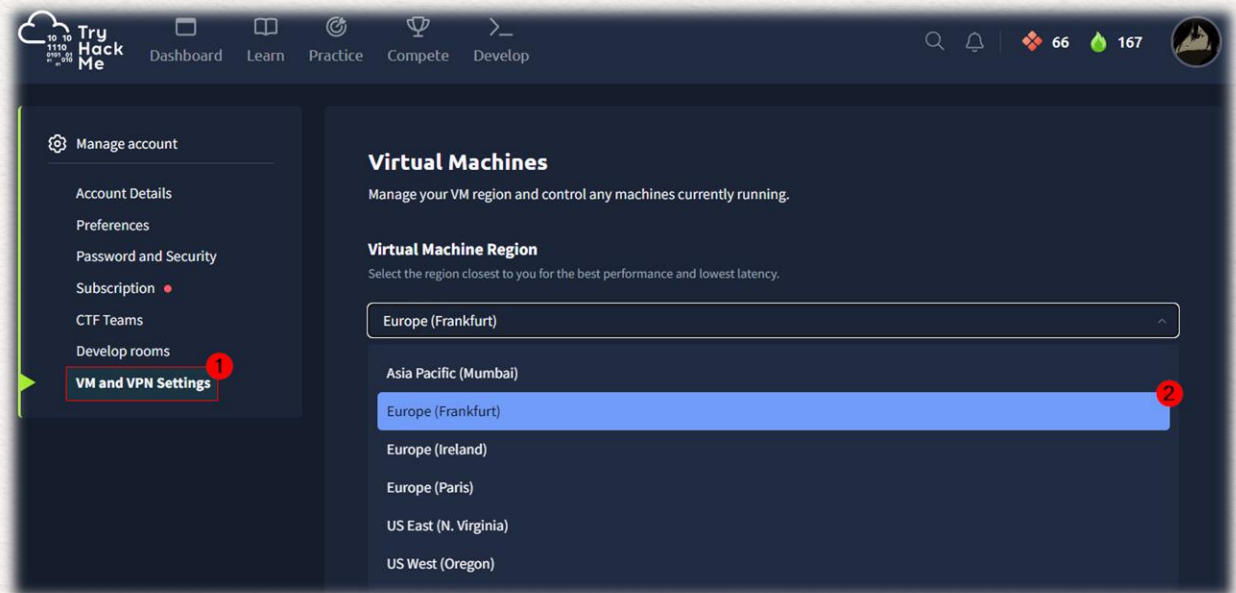

Figure 1: Set the region and then download the OVPN file

- Ensure you're able to connect to the VPN before the CTF begins. It'll save you from troubleshooting when you'd rather be hacking.

SECTION 05

Warning

1. The CTF isn't meant to rank you against others, and the results won't be used anywhere afterward. The only person you're cheating is yourself.
2. So the choice is yours: mess around for five minutes, or park your ass in that chair and solve the challenges the way they were meant to be solved.

⚠ WARNING

Any form of DoS/DDoS, abuse, or other misconduct will not be tolerated.
