SECTION 01

General Guide

- ☐ This CTF is skill-based, not competitive—the points you earn are not used for rankings or evaluations.
- ☐ Solve the challenges, defeat the demons, and capture the flags to earn your points.
- ☐ If you're not enjoying at least some part of it, you're probably overthinking it.
- ☐ **Hints exist for a reason.** If you're stuck, use them instead of wandering around blindly. Learning is more important than brute-forcing your way through.
- ☐ You have 36 hours, which is plenty of time. Stay calm, stay hydrated, take breaks when needed—you've got this!
- ☐ Flag Format: **KNY{this_is_a_demo_flag}**

NOTE

- Remember, this CTF isn't a battle against anyone else—it's a battle against **yourself**.
- There are **no rankings or leaderboards**.
- Your goal is simple: outperform your previous self, break through that goddamn wall, and become better than you were yesterday.

SECTION 02

About Kimetsu CTF

- ☐ The CTF follows the storyline of **Demon Slayer**, the Japanese anime.
- ☐ Every challenge is tied to a moment in the story. As the story progresses, you'll be tasked with solving challenges and capturing flags.
- ☐ The CTF follows a **Jeopardy-style** format, featuring categories such as Web Exploitation, Reverse Engineering, Cryptography, and many more.
- ☐ You have **36 hours** to dive in. Do whatever you can and pwn the hell out of this CTF.

★ IMPORTANT

- The project and its servers will remain available **indefinitely**, even after the 36-hour event ends.
- The time limit only applies to the support, assistance, and management we'll be providing during the event.
- So let's see how much damage you can do within those 36 hours, yeah?

SECTION 03

Initial Setup

1. Download the CTF-Setup from the provided [Download Link](#).
2. The archive is password-protected. The **password** will be shared on the day of the CTF.
3. Upon unlocking the zip file and extracting it, launch the **index.html** in your browser to begin the hack.

◆ IMPORTANT POINT

- ☐ Keep the extracted folder **intact**.
- ☐ Renaming, moving, or deleting files is a dumb move.
- ☐ A **stable internet** connection is recommended.

⚠ WARNING

Avoid switching browsers midway through the CTF, as your progress and game data are stored locally within the browser.

SECTION 04

Additional Setup

- A few challenges require you to interact with machines hosted on the **TryHackMe** platform.
- To avoid last-minute setup hassles, download your **TryHackMe VPN (UDP)** configuration file for the **Europe (Frankfurt)** region beforehand — [Link](#).

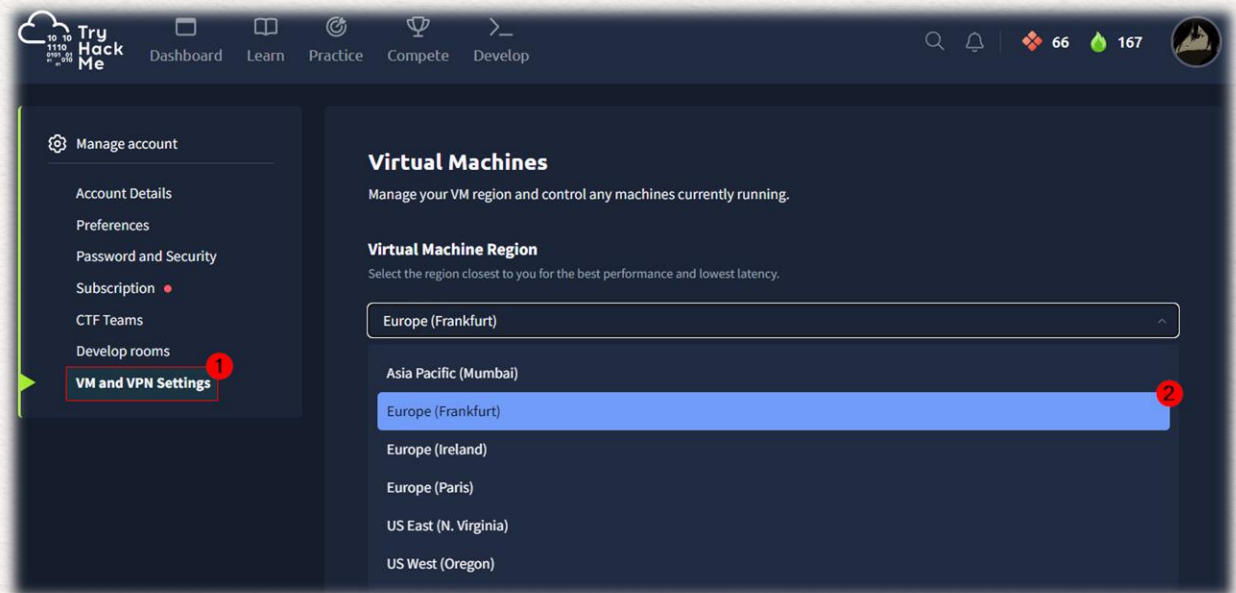

Figure 1: Set the region and then download the OVPN file

- Ensure you're able to connect to the VPN before the CTF begins. It'll save you from troubleshooting when you'd rather be hacking.

SECTION 05

Warning

1. This CTF isn't designed to rank you against others, and your results won't be used anywhere afterward.
2. **There are no prizes, no leaderboards, and nothing to prove.** If you choose to skip the intended experience or take shortcuts, the only person you're cheating is yourself.
3. Kimetsu CTF was built to be experienced, not bypassed. Every challenge, every story beat, and every "what the hell?" moment is there for a reason.
4. **So the choice is yours:** keep relying on shortcuts like a coward, or park your ass in that chair and solve the shit out of the challenges the way they were meant to be solved.

⚠ WARNING

Any form of DoS/DDoS, abuse, or other misconduct will not be tolerated.
